A4 portrait — 595 × 842 pt

Chapter I

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.

Tall phone scan — 420 × 900 pt

Chapter II

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.

Chapter III

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.

Stored sideways — 900 × 600 pt, /Rotate 90

Chapter IV

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.

Stored sideways — 900 × 600 pt, /Rotate 270

Chapter V

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.

Chapter VI

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.

A5 landscape — 595 × 420 pt

Chapter VII

The quick brown fox jumps over the lazy dog.
A scan can arrive at almost any size: a phone photo,
a flatbed page, or two pages captured as one spread.
Normalizing should fit each page without stretching it,
without clipping the edges, and without losing the
orientation the scanner recorded in the PDF.
This fixture keeps every case on its own page so the
before and after output can be compared directly.
The frame marks the visible paper edge.
